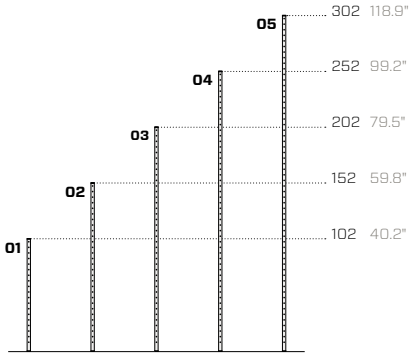
Uno

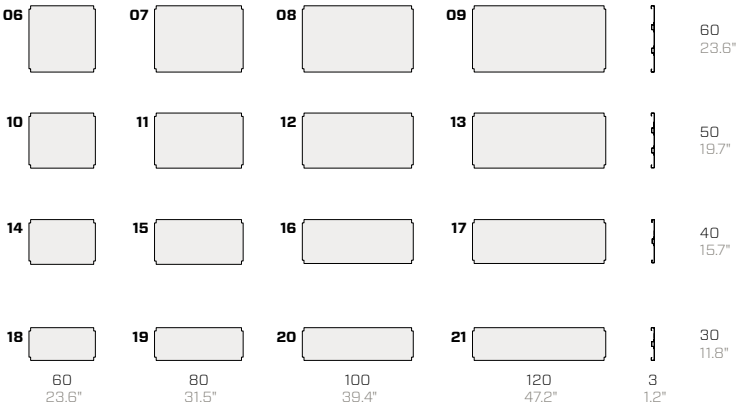
Dorino Fantin, 1973

Uprights / Montanti / Pfosten

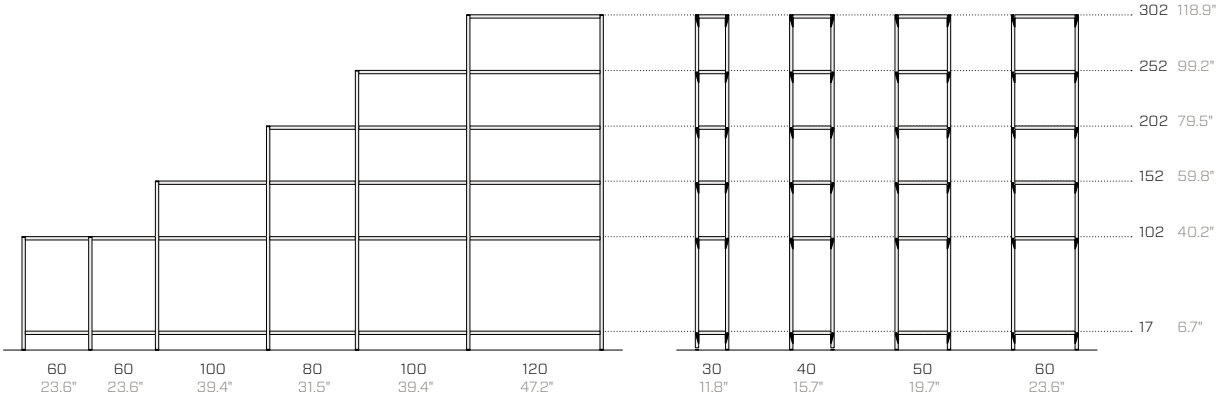


Slot pitch / Passo fori / Bohrungsabstand = 5 cm / 1.9"

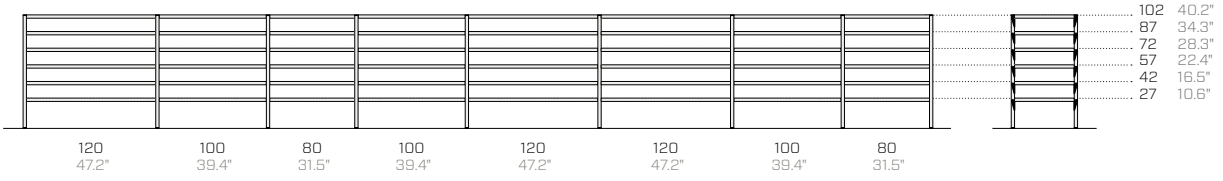
Shelves / Ripiani / Regalböden



Explanatory compositions / Composizioni esplicative / Beispielkombination



Minimum height of first shelf / Altezza minima primo ripiano / Mindesthöhe erster Regalboden = 17 cm / 6.7"



Minimum pitch between shelves / Passo minimo tra ripiani / Mindestabstand zwischen Regalböden = 15 cm / 5.9"

Always add **5 cm (1.97")** to the nominal length of compositions, to allow for the overall dimensions of click-fasteners and uprights at the ends.
Aggiungere sempre **5 cm (1.97")** alla lunghezza nominale delle composizioni, per calcolare anche gli ingombri dei ganci e dei montanti posti alle estremità.
Immer zusätzlich **5 cm (1.97")** zur Nominallänge der Kombinationen hinzuaddieren, so dass auch die Abmessungen der Haken und Pfosten an den Enden berücksichtigt werden.

Es.: 120 + 100 + 80 + 100 + 120 + 120 + 100 + 80 **+ 5** = 825 cm
47.2" + 39.4" + 31.5" + 39.4" + 47.2" + 47.2" + 39.4" + 31.5" **+ 1.97"** = 324.8"

Technical information

Metal Non-toxic powder coating for interior use, with no heavy metals. Cured in an oven at 190°C, following degreasing and phosphating. Guaranteed minimum thickness of 50 microns. Minimum resistance to salt spray of 200 hours (in accordance with the ASTM B117 standard). Not suitable for direct contact with food as envisaged in Italian Ministerial Decree 21/03/73. Before the coating is added, it is possible to assess whether to give the products a special treatment to make them more resistant to wear and exposure to the elements. There is a surcharge for this treatment. Requests for other RAL finishes can be considered.

Informazioni tecniche

Metallo Verniciatura per interni a polveri atossiche prive di metalli pesanti, con passaggio in forno a 190 °C, previo trattamento di sgrassaggio e fosfatazione. Spessore minimo garantito 50 micron, resistenza minima in nebbia salina pari a 200 ore (norma ASTM B117). Non idonea al contatto diretto con gli alimenti come previsto dal decreto italiano D.M. 21/03/73. Prima della verniciatura, è possibile valutare l'applicazione di un trattamento al fine di rendere i prodotti più resistenti all'uso e all'esposizione agli agenti atmosferici. Per tale trattamento è prevista una maggiorazione di prezzo. Altre finiture RAL valutabili su richiesta.

Technische Informationen

Metall Die Lackierung der gift- und schwermetallfreien Pulverlacke für Innenbereiche erfolgt im Lackierofen bei 190 °C nach vorheriger Entfettung und Phosphatierung. Die garantierte Mindeststärke der Lackschicht beträgt 50 Mikron bei einer Mindestprüfungsdauer von 200 Stunden im Salznebel (ASTM-Norm B117). Nicht für den direkten Kontakt mit Nahrungsmitteln geeignet, gemäß Ministerialdekret vom 21.03.1973 i.d.g.F. Vor der Lackierung kann die Anwendung einer Behandlung abgewägt werden, um die Produkte für den Gebrauch und gegen Witterungseinflüsse widerstandsfähiger zu machen. Für diese Behandlung ist ein Preisaufschlag vorgesehen. Auf Anfrage können andere RAL-Finishes in Betracht gezogen werden.

Metal load-bearing frame which stands out for its speedy assembly and its stability and sturdiness. Affording potentially infinite versatility.

Uprights in 30 x 30 mm (1.18" x 1.18") tubular metal measuring 1.2 mm (0.05") in thickness, fitted with plastic caps at the ends. Along the entire length, one side features slots with a pitch of 50 mm (1.97") for the variable positioning of the click fasteners and hence of the shelves.
The use of tubular metal, which provides higher performance levels than the more commonly used open section bars, ensures minimal torsional and flexural effects.

Galvanised click fasteners made of pressed sheet metal, 2.5 mm (0.10") thick. These fasteners are anchored to the uprights using two purpose-designed side fins which fit into the slots in the uprights. The shelves then click onto the upper fins of the actual click-fasteners. Every click fastener is designed to support 2 consecutive shelves simultaneously, enveloping and concurrently reinforcing the upright to which it is anchored.

Shelves in 0.7 mm (0.03") thick sheet metal folded three times along the two front sides to prevent accidents; omega-shaped reinforcements are envisaged on the underside to increase their load capacity (UNI 8601/1984 test: level 5 out of 5).
The four corners of the shelves are further reinforced with a 3 mm (0.12") thick sheet metal support that is designed to house the upright completely; this ensures perfect continuity between two consecutive shelves, without any gaps.

This product is delivered unassembled.

Struttura metallica autoportante, caratterizzata da rapidità di montaggio, stabilità e robustezza. Versatilità potenzialmente infinita.

Montanti in tubo 30 x 30 mm (1.18" x 1.18") di spessore 1.2 mm (0.05"), dotati alle estremità di tappi in plastica. Su tutta la lunghezza, un lato presenta forature passo 50 mm (1.97") che consentono il posizionamento variabile dei ganci, quindi dei ripiani.
L'utilizzo del tubo, più performante rispetto ai profilati aperti comunemente utilizzati, garantisce effetti torsionali e flessionali minimi.

Ganci zincati realizzati in lamiera stampata di spessore 2.5 mm (0.10"). L'ancoraggio al montante è possibile tramite due opportune alette laterali che si inseriscono nei fori dei montanti. I ripiani vengono successivamente fissati ad incastro sulle alette superiori dei ganci stessi. Ogni singolo gancio può sostenere contemporaneamente 2 ripiani consecutivi, abbracciando e rinforzando allo stesso tempo il montante al quale è ancorato.

Ripiani in lamiera di spessore 0.7 mm (0.03") con triplice piegatura sui due lati frontali con funzione antinfortunistica; inferiormente sono previsti rinforzi ad omega che ne aumentano notevolmente la capacità di carico (prova UNI 8601/1984: livello 5 su 5). I quattro angoli dei ripiani sono ulteriormente rinforzati da un supporto in lamiera di spessore 3 mm (0.12") che consente l'alloggiamento completo del montante, al fine di ottenere una perfetta continuità tra due ripiani consecutivi, senza alcuna fessura.

Il prodotto viene fornito smontato.

Selbsttragender Metallkorpus, der sich durch eine schnelle Montage, Standsicherheit und Stabilität auszeichnet. Vielseitig und äußerst flexibel einsetzbar.

Pfosten aus Metallrohr 30 x 30 mm (1.18" x 1.18") mit einer Stärke von 1.2 mm (0.05"), mit Plastikpfropfen an den Ende. Auf der gesamten Länge befinden sich Bohrungen, die eine variable Positionierung der Haken und Regalböden mit einem Abstand von 50 mm (1.97") ermöglichen.
Dank der Metallrohre, die statt der üblicherweise eingesetzten offenen Profileisen verwendet werden, werden Torsions- und Biegeeffekte auf ein Minimum reduziert.

Verzinkte Haken aus Stanzblech mit einer Stärke von 2.5 mm (0.10"). Die Verankerung am Pfosten erfolgt über zwei Flügel, die in die Bohrungen des Pfostens eingeführt werden. Die Regalböden werden dann auf die oberen Flügel der Haken aufgesteckt. An jeden der Haken können gleichzeitig 2 nebeneinanderliegende Regalböden befestigt werden. Zudem umfasst der Haken den Pfosten und verstärkt ihn auf diese Weise.

Regalböden aus Blech mit einer Stärke von 0.7 mm (0.03") mit dreifacher Sicherheitsfalzung auf beiden Vorderseiten; auf der Unterseite befinden sich Omega-Profile, die die Tragfähigkeit der Böden erhöhen (Prüfung nach UNI 8601/1984: Stufe 5 von 5). Die vier Ecken der Regalböden werden zusätzlich durch eine Halterung aus Blech mit einer Stärke von 3 mm (0.12") verstärkt, die den Pfosten vollständig aufnimmt, so dass zwischen zwei benachbarte Regalboden kein Spalt und somit eine durchgehende Ablagefläche entsteht.

Das Produkt wird unmontiert geliefert.
